Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the instant application:

What is claimed is:

1. (Currently Amended) A method of arranging grammar files in a presentation list, comprising the steps of:

receiving a ~~callflow development system~~ request to visually display in a ~~callflow development~~ graphical user interface the grammar files in the presentation list;

searching among a plurality of files and distinguishing between those files that contain built-in grammars, each defining a built-in grammar file, and those files that contain user-defined grammars, each defining a user-defined grammar file;

sorting the grammar files based on a first criterion that assigns user-defined grammar files priority over built-in grammar files; and

sorting the grammar files according to a second criterion; and

simultaneously displaying user-defined grammar files and the built-in grammar files within the presentation list such that each user-defined grammar file is visually distinguishable from each built-in grammar file by presenting elements of the built-in grammar files and elements of the user-defined grammar files as a sequential list of elements wherein elements of the user-defined grammar files are presented ahead of elements of the built-in grammar files

wherein when a built-in grammar file and a user-defined grammar file share the same name designation, the user-defined file is presented above the built-in grammar file.

2. (Original) The method of claim 1, wherein the method further comprises the step of displaying the grammar files when a user selects the grammar files.

3. (Previously Presented) The method of claim 1, wherein the step of visually displaying comprises presenting the presentation list such that each grammar file is labeled with a label indicating whether the grammar file is a user-defined grammar file or a built-in grammar file.

4. (Previously Presented) The method of claim 1, wherein the step of visually displaying comprises presenting the presentation list such that each grammar file is presented in a text format that indicates whether the grammar file is a user-defined grammar file or a built-in grammar file.

5. (Previously Presented) The method of claim 1, wherein the user-defined grammar files and the built-in grammar files can share the same name.

6. (Previously Presented) The method of claim 1, wherein the second criterion is an alphabetical order.

7. (Previously Presented) The method of claim 1, wherein the second criterion is a chronological order.

8. (Currently Amended) A system for arranging grammar files in a presentation list comprises:

a memory; and

a processor programmed to

receive a ~~callflow development system~~ request to display the grammar files from the memory in the presentation list,

search among a plurality of files and distinguish between those files that contain built-in grammars, each defining a built-in grammar file, and those files that contain user-defined grammars, each defining a user-defined grammar file,

sort the grammar files based on a first criterion that assigns user-defined grammar files priority over built-in grammar files,

sort the grammar files according to a second criterion, and

simultaneously display the user-defined grammar files and the built-in grammar files in the presentation list in a ~~callflow development~~ graphical user interface such that each user-defined grammar file is visually distinguishable from each built-in grammar file by presenting elements of the built-in grammar files and elements of the user-defined grammar files as a sequential list of elements wherein elements of the user-defined grammar files are presented ahead of elements of the built-in grammar files.

9. (Original) The system of claim 8, wherein the processor is further programmed to display the grammar files when a user selects the grammar files.

10. (Previously Presented) The system of claim 8, wherein the processor is further programmed to distinguish between a user-defined grammar and a built-in grammar by displaying the presentation list such that each grammar file is labeled with a label indicating whether the grammar file is a user-defined grammar file or a built-in grammar file.

11. (Previously Presented) The system of claim 8, wherein the processor is further programmed to distinguish between a user-defined grammar and a built-in grammar by displaying the presentation list such that each grammar file is presented in a text format that indicates whether the grammar file is a user-defined grammar file or a built-in grammar file.

12. (Previously Presented) The system of claim 8, wherein the user-defined grammar files and the built-in grammar files can share the same name.

13. (Previously Presented) The system of claim 8, wherein the second criterion is an alphabetical order.

14. (Previously Presented) The system of claim 8, wherein the second criterion is a chronological order.

15. (Original) The system of claim 8, wherein the presentation list is at least one among a drop-down list and a list box.

16. (Currently Amended) A ~~machine-readable~~ computer-readable storage, having stored thereon a computer program having a plurality of code sections executable by a ~~machine~~ computer for causing the ~~machine~~ computer to optimally arrange grammar files in a presentation list, comprising the steps of:

receiving a ~~callflow development system~~ request to visually display in a ~~callflow development graphical~~ user interface the grammar files in the presentation list;

searching among a plurality of files and distinguishing between those files that contain built-in grammars, each defining a built-in grammar file, and those files that contain user-defined grammars, each defining a user-defined grammar file;

sorting the grammar files based on a first criterion that assigns user-defined grammar files priority over built-in grammar files;

sorting the grammar files according to a second criterion; and

visually displaying the presentation list such that each user-defined grammar file is simultaneously displayed and visually distinguishable from each built-in grammar file by presenting elements of the built-in grammar files and elements of the user-defined grammar files as a sequential list of elements wherein elements of the user-defined grammar files are presented ahead of elements of the built-in grammar files.

17. (Currently Amended) The ~~machine-readable~~ computer-readable storage of claim 16, wherein the machine-readable storage is further programmed to sort by the second criterion being an alphabetical order.

18. (Currently Amended) The ~~machine-readable~~ computer-readable storage of claim 16, wherein the machine-readable storage is further programmed to sort by the second criterion being a chronological order.
